History and Economic Life offers students a wide-ranging introduction to both quantitative and qualitative approaches to interpreting economic history sources from the Middle Ages to the Twentieth Century. Having identified an ever-widening gap between the use of qualitative sources by cultural historians and quantitative sources by economic historians, the book aims to bridge the divide by making economic history sources more accessible to students and the wider public, and highlighting the need for a complementary rather than exclusive approach. Divided into two parts, the book begins by equipping students with a toolbox to approach economic history sources, considering the range of sources that might be of use and introducing different ways of approaching them. The second part consists of case studies that examine how economic historians use such sources, helping readers to gain a sense of context and understanding of how these sources can be used. The book thereby sheds light on important debates both within and beyond the field, and highlights the benefits gained when combining qualitative and quantitative approaches to source analysis. Introducing sources often avoided in culturally-minded history or statistically-minded economic history courses respectively, and advocating a combined quantitative and qualitative approach, it is an essential resource for students undertaking source analysis within the field.

The excellent list of themes and chapters in this volume reflects the maturity reached by feminist economics in its different dimensions. Based on the notion of social provisioning for all as the basic objective of economics, they represent a challenge to conventional economic thought and they show the importance of understanding theory, institutions, empirical work, and policy from a gender perspective. The global perspective provided through themes and authors is a very useful contribution to the literature. Lourdes Bener'a, Cornell University, US Standard economics has a narrow and distorted vision

of what the economy is, and how it works. Gender scholars are on the forefront of developing better, more encompassing models of human provisioning for well-being. This volume presents a wonderful sampling of these new theoretical and empirical developments. Paula England, New York University, US This is an impressive collection that delves deeply and broadly into the myriad ways that gender shapes and alters economic lives and illuminates complex facets of the economic and social provisioning process across the globe. The chapters, by an exciting variety of researchers, policy analysts, and practitioners from numerous fields, present a consistent and persuasive vision of economic well-being as critical to the flourishing of all people. Myra H. Strober, Stanford University, US In the aftermath of global economic downturn, it has never been more important to understand how gender relates to economic life and well-being. This interdisciplinary collection of original research details key areas of intersection, provides a comprehensive overview of the current state of research and proposes avenues for further investigation. The Handbook illuminates complex facets of the economic and social provisioning process across the globe. The contributors academics, policy analysts and practitioners from wide-ranging areas of expertise discuss the methodological approaches to, and analytical tools for, conducting research on the gender dimension of economic life. They also provide analyses of major issues facing both developed and developing countries. Topics explored include civil society, discrimination, informal work, working time, central bank policy, health, education, food security, poverty, migration, environmental activism and the financial crisis. Economists, sociologists and political scientists will find this book to be an invaluable research tool, as will academics, researchers and students with an interest in economics particularly feminist economics gender studies and global studies.

Islamic economics and finance (IEF) has recently enjoyed a spike in interest and a rise in status from theology-tinged discussion fodder for Muslim intellectuals to a fully fledged academic discipline knocking on the doors of university social science departments. The Handbook of Empirical Research on Islam and Economic Life provides a solid background and overview of current empirical research, evaluating how well Islamic institutions have performed in pursuing their objectives. With contributions from leading scholars, this unique Handbook provides chapters examining a range of phenomena in Islamic finance, focusing on five main research areas: religion and growth, Islamic social finance, Islamic banking and finance, the Islamic capital market and sukuk (Islamic bonds). This selection of research literature provides: * a socio-economic profile of Muslim countries* an outline of Islamic systems of accounting and governance* an analysis of the religion-development link* a consideration of the role of the state under Islam. Scholars of finance and Islam in Muslim and in Western universities, students in graduate and post-graduate courses in Islamic studies, and Islamic research institutes and libraries in Western, Middle Eastern and Asian universities will all find great value in this vital resource and its

exploration of a compelling approach to finance.

In recent years, sociologists have taken up a fruitful examination of institutions such as capital, labor, and product markets; industrial organization; and stock exchanges. Compared to earlier traditions of economic sociology, recent work shows more interest in phenomena usually studied exclusively by economists. At the same time, recent work challenges the adequacy of the neoclassical model. In *The Sociology of Economic Life*, editors Granovetter and Swedberg incorporate classic and contemporary readings in economic sociology and related disciplines to provide students with a broad understanding of the many dimensions of economic life. A thorough and accessible introduction by the editors traces the history of thought in the field and assesses recent advances and future trends. The third edition is substantially revised and updated with eight new chapters, including original contributions from some of the field's leading scholars that explain cutting-edge research and critically review the essential scholarship in the field.

Werner Sombart (1863-1941) may well have been the most famous and controversial social scientist in Germany during the early twentieth century. Highly influential, his work and reputation have been indelibly tainted by his embrace of National Socialism in the last decade of his life. Although Sombart left an enormous opus spanning disciplinary boundaries, intellectual reaction to his work inside and outside of Germany is divided and ambivalent. Sombart consistently responded to the social and political developments that have shaped the twentieth century. *Economic Life in the Modern Age* provides a representative sampling of those portions of Sombart's work that have stood the test of time. The volume opens with a substantial introduction reviewing Sombart's life and career, the evolution of his major intellectual concerns, his relation to Marx and Weber, and his political affiliation with the Nazis. The editors' selection of texts emphasizes areas of Sombart's economic and cultural thought that remain relevant, particularly to those intellectual trends that seek a more broadly based, cross-disciplinary approach to culture and economics. Sombart's writings on capitalism are represented by essays on the nature and origin of the market system and the diversity of motives among the bourgeoisie and the proletariat. Also included is an excerpt from Sombart's controversial *The Jews and Modern Capitalism*, exploring the widely perceived relation between economic life and Judaism as a religion. In essays on the economics of cultural processes, Sombart's comprehensive and expansive idea of cultural science yields prophetic insights into the nature of urbanism, luxury consumption, fashion, and the cultural secularization of love. The volume's final section consists of Sombart's reflections on the social influences of technology, the economic life of the future, and on socialism, including the influential essay "Why is there no Socialism in the United States." Encapsulating the most valuable aspects of his

work, *Economic Life in the Modern Age* provides clear demonstration of Sombart's sense for fine cultural distinctions and broad cultural developments and the predictive power of his analyses. It will be of interest to sociologists, economists, political scientists, and specialists in cultural studies. Nico Stehr is professor at the Max Planck-Institut für Meteorologie in Hamburg. Moral Sentiments and Material Interests presents an innovative synthesis of research in different disciplines to argue that cooperation stems not from the stereotypical selfish agent acting out of disguised self-interest but from the presence of "strong reciprocators" in a social group. Presenting an overview of research in economics, anthropology, evolutionary and human biology, social psychology, and sociology, the book deals with both the theoretical foundations and the policy implications of this explanation for cooperation. Chapter authors in the remaining parts of the book discuss the behavioral ecology of cooperation in humans and nonhuman primates, modeling and testing strong reciprocity in economic scenarios, and reciprocity and social policy. The evidence for strong reciprocity in the book includes experiments using the famous Ultimatum Game (in which two players must agree on how to split a certain amount of money or they both get nothing.)

Winner of the Nobel Memorial Prize in Economic Sciences Richard Thaler challenges the received economic wisdom by revealing many of the paradoxes that abound even in the most painstakingly constructed transactions. He presents literate, challenging, and often funny examples of such anomalies as why the winners at auctions are often the real losers—they pay too much and suffer the "winner's curse"—why gamblers bet on long shots at the end of a losing day, why shoppers will save on one appliance only to pass up the identical savings on another, and why sports fans who wouldn't pay more than \$200 for a Super Bowl ticket wouldn't sell one they own for less than \$400. He also demonstrates that markets do not always operate with the traplike efficiency we impute to them.
